# Installments

The below steps set the 64 bit win7 system as example,  
you should install **.net framework 3.5 SP1** support  
library for 32 bit XP system

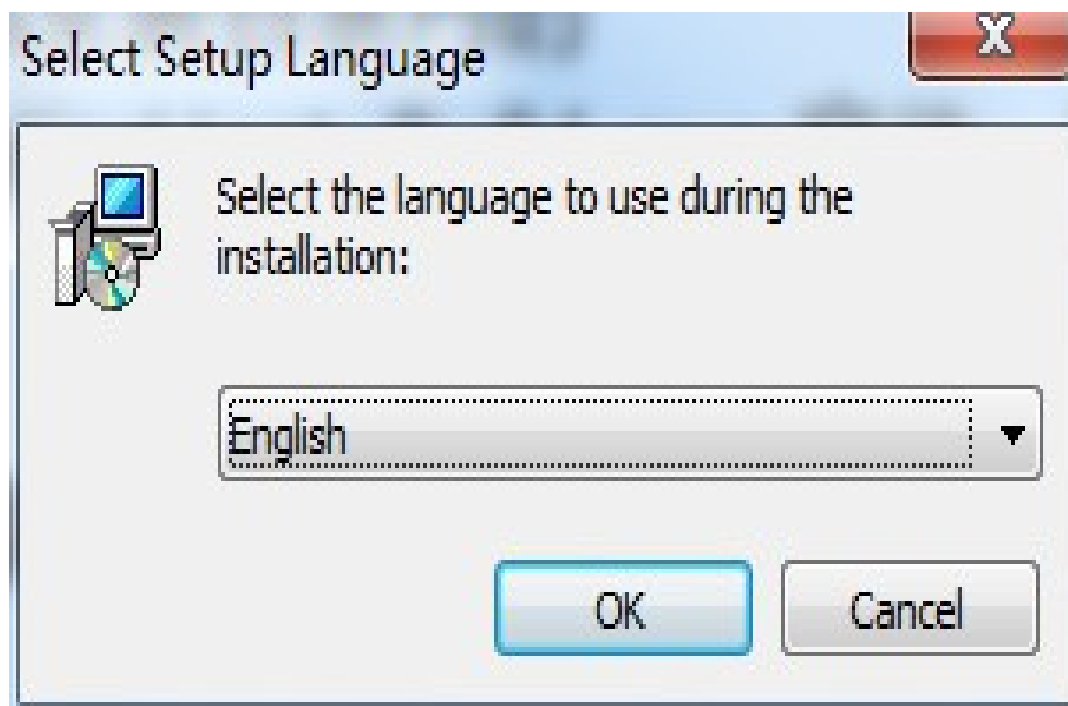

Find this **setupRepetierHost\_0\_84.exe file** , double click  
to install,

If antivirus software intercept, please trust immediately,  
otherwise, you can not install.

Choose a language, see the picture below:

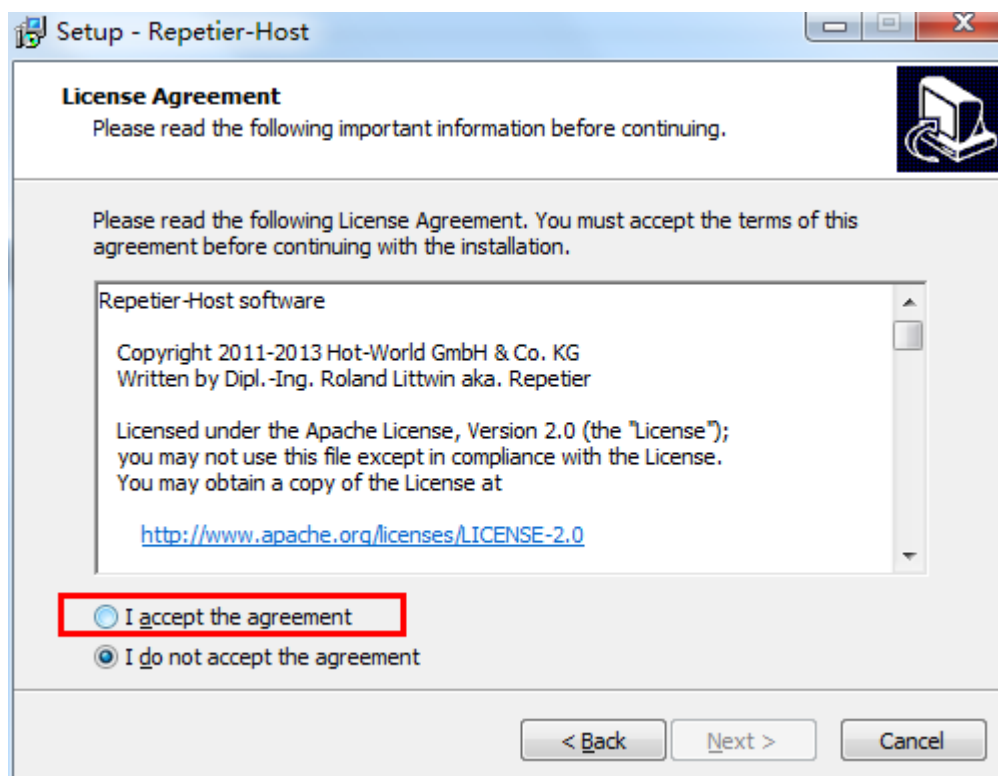

This is just the setup language, not the working language

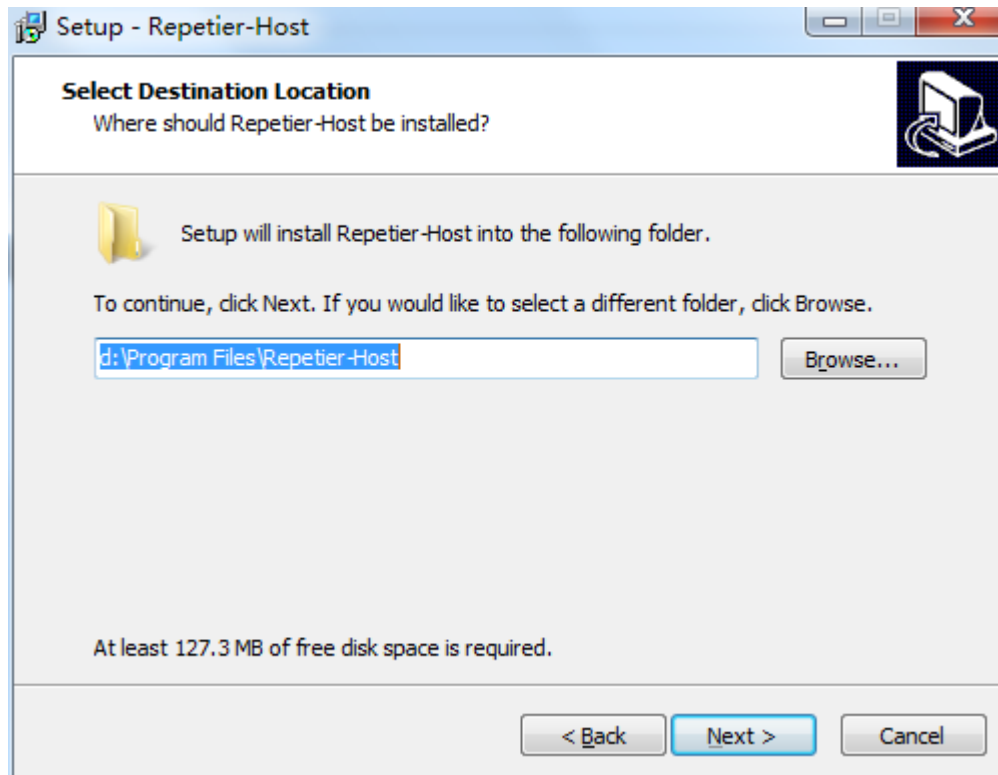

Press Next button

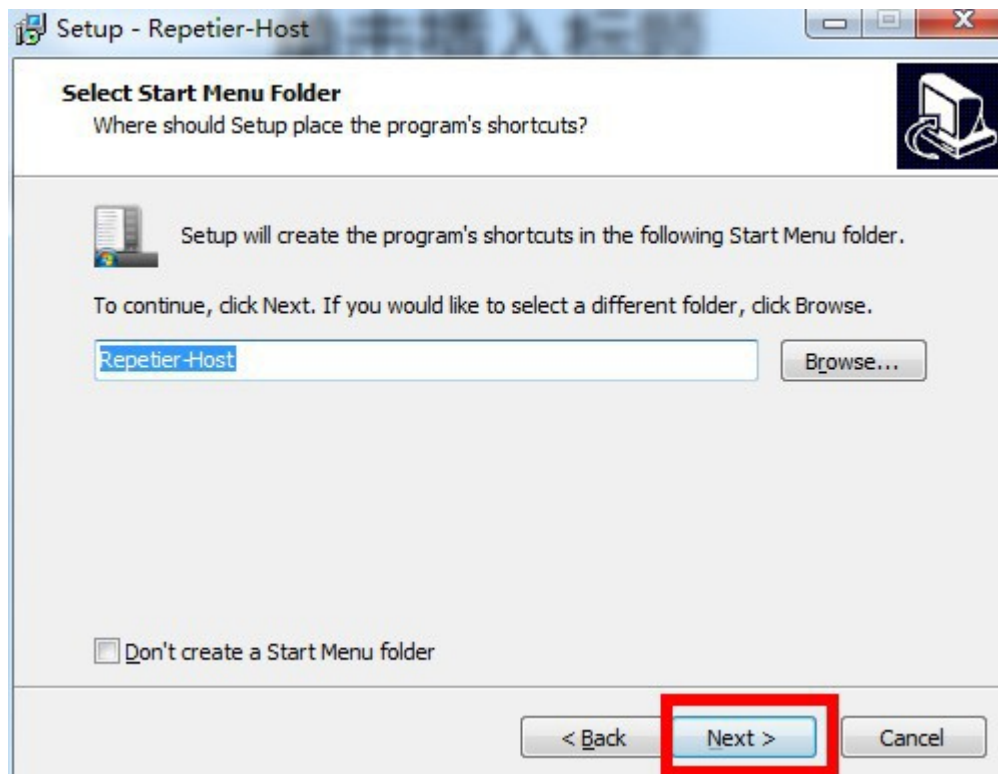

Choose "I accept the agreement", then click "next"

## Select Destination location

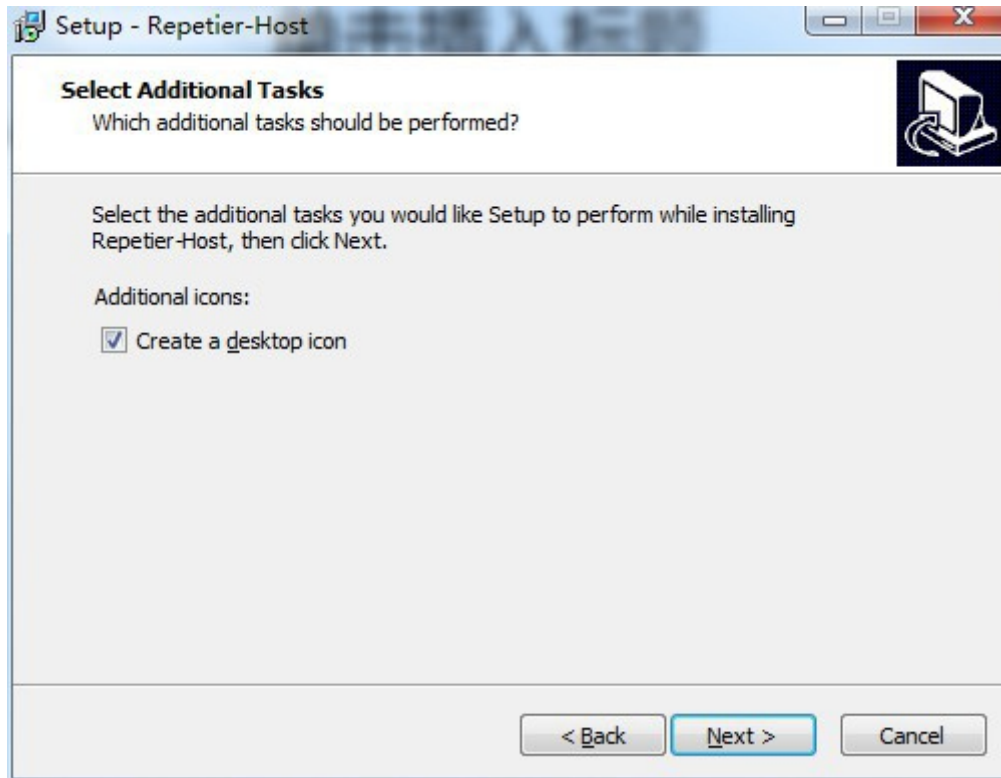

## Press next button

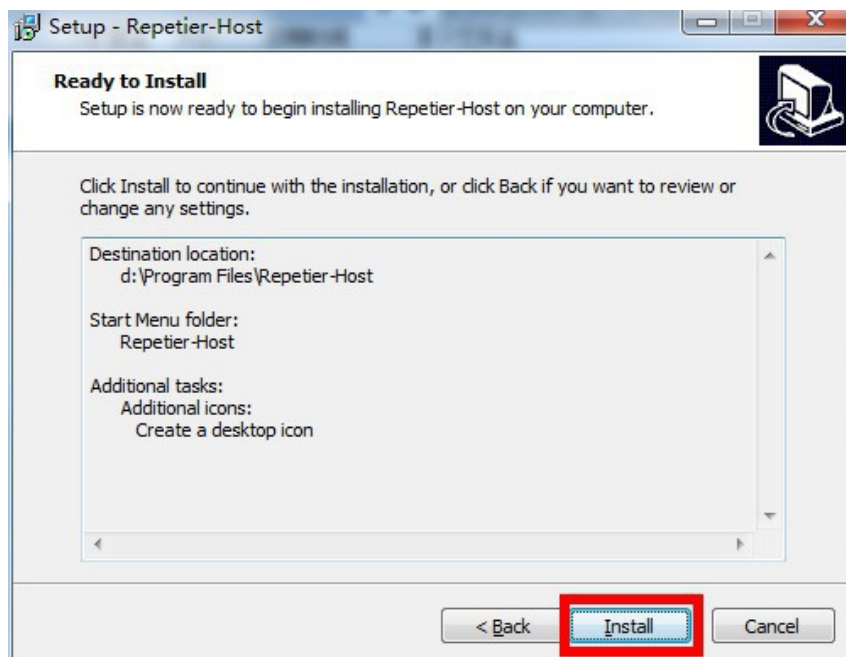

Choose "Create a desktop icon" , there would be shortcut on the desktop.

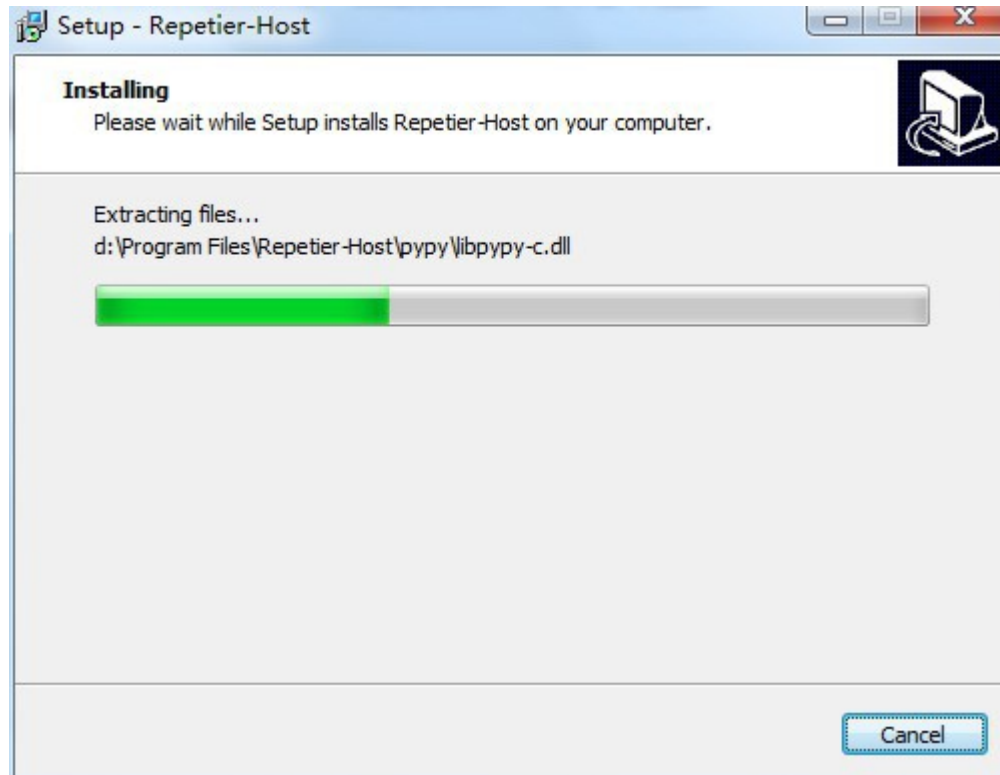

Press next

Press install button

If the antivirus software intercept, please allow this operation immediately.

When installing, if the antivirus software intercept, and you don' t allow it, then you might install again.

FINISH
